TEST PLAN for RDE.LT

Introduction:

https://www.rde.lt/ is representing one of the biggest Latvian retail chains "RD Electronics" in Lithuania.
The store sells computers, mobile phones, large and small household appliances of the most popular brands. RDE.LT is authorised to represent more than 250 manufacturers.

Objectives:

- Verify core functional areas, such as registration/login, shopping cart, product browsing;
- Validate search & filtering to confirm that product search, sorting and filtering return accurate results;
- Evaluate User Experience (UX) – ensure the website is intuitive, user-friendly, and easy to navigate while assessing overall usability.

Testing priorities:

1. Registration;
2. Log in/out options and account management;
3. Product search;
4. Shopping cart functionality;
5. Usability, website maintenance (links, filtering of products, delivery information, etc.).

Out of scope:

Security, reliability, disaster recover, failover, accessibility testing and payments will not be tested.

Methods:

- Exploratory testing;
- Functional testing;
- UX testing.

Testing tools:

- Chrome Version 132.0.6834.160 (Official Build) (x86_64) (macOS 14.6);
- Jira for defect test scenario and defect registration.

Acceptance criteria:

Suspension criteria is not defined.

Testing ends when all test priorities are covered and defects are registered in Jira.

Resources:

Tester - Laura Krapauskaitė

Schedule:

February 10th 09:30-17:00

Results:

A test scenario with label "FinalScenario "is created, all defects found are recorded on the Jira platform with label - "Final".
